

Bring the *beauty* of your home to light.

At Pro Green, we're also proud to offer professional landscape lighting design and installation. A lighting system will enhance your landscape, extend your enjoyment of the outdoors, and add to the security, safety and value of your property. As always, Pro Green only installs professional quality contractor-grade transformers and fixtures, from leading names like Vista, Hadco and Nightscaping – products that provide superior function, greater reliability, and longer warranties.

Before we give you an estimate we'll do a comprehensive walk-through with you to determine your lighting needs. We'll even provide battery-powered sample lights to help demonstrate different effects! Your ProGreen consultant will discuss different types of fixtures, bulb sizes and spread patterns, and recommend fixture colours and finishes that will enhance the aesthetics of your property.

Installation is simple and hassle-free, and we'll make sure you're familiar with all controls and settings when the job is done. Naturally you can count on us for year-round service, too.

Here are some Pro Green lighting effects that will enhance your property

Up Lighting

Strategically placed fixtures that focus light upwards, dramatically highlighting buildings, trees or shrubs.

Path Lighting

Casts a symmetrical light pattern at a low level to show visitors where to walk. It also highlights plants and shrubberies along the way.

Accent Lighting

Used to project a beam of light onto objects of focus, such as statues, trees, buildings or shrubberies.

Silhouette Lighting

Adds a dramatic effect when lights are projected onto a vertical surface from directly behind an interesting object or plant.

Spread Lighting

For illuminating ground cover and low shrubberies. Spread lighting highlights areas of interest, and brings out dazzling colours at night for a stunning effect.

Security Lighting

Spotlights and floodlights placed at key locations to deter intruders and add dramatic depth to your property.

Pro Green helps make your home all it can be.

A professionally installed irrigation or lighting system from Pro Green will enhance your lifestyle and increase the value of your property. So call Pro Green today to discuss your needs. We'll help make your home the envy of the neighbourhood!

Why the grass is always greener on *your* side of the street.

Our Automatic Sprinkler Systems make a beautiful difference.

Imagine never again having to drag a hose around. Imagine having more free time. Imagine lush, green grass – vibrant flowerbeds.

That's the beauty of a sprinkler system from Pro Green.

A time-controlled underground sprinkler system from Pro Green not only eliminates the chore of hand watering, but also saves water and gives your valuable landscape the uniform coverage it needs to stay healthy and vigorous. It protects your investment, increases your property value, and irrigates your lawn at the optimum time – in early *morning* – minimizing water loss due to wind and evaporation.

Here's what you can expect from Pro Green:

- Pro Green is full-service. We design, install and service sprinkler systems and landscape lighting.
- Every job is custom designed and tailored to your property. Our estimates are based on a thorough inspection of your property, and guaranteed to remain as quoted.
- We're experts in hydraulics, sprinkler system layout, moisture requirements and soil types. Our experience ensures years of trouble-free operation.
- Your installation is *trenchless*, so your property looks as good as new in no time.
- We never use cut-rate big box store products, only contractor-grade professional materials from leading names like Hunter, Rain-Bird, Irritrol and Toro.
- We handle everything, including calls to the utility companies before we dig
- We have been a family run irrigation business since 1995. Landscape care is our *only* business, and we take pride in giving you personalized service, with full-time, year-round staff, and 7 fully-stocked radio-dispatched trucks.
- We've done large commercial installations and service for MDS Sciex, North York General Hospital, Menkes Property Management, Aastra Technologies, IKEA, Toronto City Hall, University of Toronto, FedEx, the TTC and more. They trust the professionals at Pro Green, and so can you.
- We're known for our customer service. Whether it's spring "start up", fall "blow-out" or routine service, we can ensure your system is performing reliably year after year.
- We're Members of Landscape Ontario & Canadian Landscape Nursery Association
- The Pro Green warranty is 5 years – 3 years longer than most others.

The key irrigation system components:

Timers/Controllers

The "brains" of the system, telling it when to turn on and for how long.

Electric Valves

Controlled by timers to act as gates for the different watering zones of your property.

Sprinkler Heads

Spray Heads are generally used in gardens and smaller turf areas. *Gear Heads or Rotors* pop-up and rotate and are used for larger grass areas.

Pipe and Fittings

The plumbing of the system. Pipes run underground throughout the property, and fittings attach to the heads and valves.

Rain Sensor

An accessory which shuts the system off for a period of time if there has been sufficient rainfall.
